

Septic Additives - Lenzyme & Trap-Cleer

Lenzyme

The superior waste digestant for your septic tank. Lenzyme the natural solution:

- Is environmentally safe protection
- Is non-porous, non-corrosive, non-caustic, non-polluting and bio-degradable
- It provides natural aid to normal operation of waste disposal systems, increasing the capacity for waste elimination
- Eliminates odors which attract disease bearing insects
- It has 100% active ingredients - no fillers
- It substantially reduces gum and pectins which cause glazing of drainfields
- Helps eliminate soggy soil and puddling due to clogging

Bio-Degradable Non-Poisonous Non-Toxic
Non-Caustic Non-Corrosive
Environmentally Safe

Lenzyme is unique in that each ingredient is functional or contributes to the biodegradation process.

There are five enzymes listed below in this product as well as four highly specialized strains of bacteria.

PROTEASE - liquifies proteins

LIPASE - liquifies grease, oil and fats

PECTINASE - liquifies pectins and gums

CELLULASE - liquifies papers and fibers

AMYLASE - liquifies starches and carbohydrates

Once placed in your system, they will double their population approximately every twenty minutes.

Why Lenzyme?

Because of our unique blend of 5 enzymes and aerobic bacteria. Each enzyme was created to liquify a specific type of solid waste found in septic tanks. The enzymes work where bacteria based products alone will not.

My system backed up for the first time. What can I do to prevent this from happening again?

A backup is the first sign of septic system failure. We can help you reverse the clogging trend. You must start a maintenance program now or you will be replacing your system soon.

Will acid help my septic system?

Acids and chemicals work only temporarily. They are extremely dangerous to use and harmful to the environment. Acids are being banned in many states.
